

## Project requirements

Name:	Helly Nilesch Shah
Community (UN SD goal):	Goal 3: Good health and Well being
Date:	17 <sup>th</sup> May, 2021

<b>Project Name</b>	CovidSupport
---------------------	--------------

### Functional Requirements

The users need to sign up to register into web portal. The users are mainly patients or their relatives. In a section of that web portal/app they can write what they need (requirements) for example, any medical equipment, injections, blood donation, blood, plasma, medicines and also they will be able to see a list of providers which are related to their needs. There will be a manual verification process to double check validity of patient's requirement. After providing the list of details and documents patients' will be able to see the help providers' details and connect with them for further help, or help providers can also contact patients for offering the help. So this web portal will mainly be informative for both (patients' and providers') of the sides.

### Technical/Performance Requirements

The project will be build up with PHP language in the back end and will have MySQL database. Project developer need to know four different syntax systems, as well as HTML, CSS and javascript. It will get change as I move forward with development.
