Introduction

- This web portal is mainly focus on the current medical needs in India for Covid patients as people are dying due to lack of medical supply.

- This portal will help Covid patients to connect with donors and healthcare workers for their medical supplies.

- Also general public will come forward to help other people like they will arrange oxygen cylinders, ventilators, injections, medicines, medical equipment etc.

- Covid patients and their relatives will write onto this portal for their urgent needs regarding to Covid.

Patients' real stories

Help providers

Working Model of CovidSupport

• There mainly two pages in this web portal, which are the informational page for patients and informational page for providers.

• The patients are need to do sign up for using the web portal and also providers need to sign up into portal.

• After having access of the web portal patients or their relatives can add their details about what they need urgently and also providers can add their details about what they providing and what they have for the Covid patients.

• These both pages have updated information about patients and providers so that both can connect with each other and discuss the situation.

Project Requirements

- Patients have to add more details like their name, age, place of living, what they need, if the writer are their relative than they have to mention their name also, contact number.
- Same as patients, the providers also need to add their details that what they have for patients, their contact information, in which region they provide help etc.
- The most required condition is that they have to update their states constantly because outdated details will not appropriate for patients and providers also. If the pages are having outdated information then their time will be wasted by contacting wrong persons.

Future Scope

•One of the required scope is cross-verification of the patients, for that they need to add their doctor prescription and also their government identification.

•It can also have different region wise pages so that patients and providers do not have to add their region of living.

•In future, it will also extend for all over the world.

•Particularly in India, the Covid treatments are provided by the government sectors and also by private organizations and hospitals so it will only possible for India for now.
